

## J2KconvertSupport の使い方

Written by Kazuma Kouno, date:2021/6/3

1 : 右下の「Analyzer」タブをクリック

2 : 解析を行いたい Java ファイル 1 つをエディタで開いていることを確認し、タブ内左上のボタンをクリック

### 3：解析結果がタブ内に出力される

```
check start:Case_Problem3

start field checking

(line 3,col 12)-(line 3,col 37)
Field "tst" doesn't have initializer.
You should use modifier "lateinit" after convert to

(line 2,col 17)-(line 2,col 38)
Field "repository" doesn't have initializer.
You should use modifier "lateinit" after convert to

finished field checking

start parameter checking

(line 11,col 28)-(line 11,col 36)
parameter:value will be changed nullable parameter
You should use @NotNull annotation.

finished parameter checking

check start:case1

check finished:case1

check start:case2

(line 5,col 5)-(line 10,col 5)
method "getAlldata" is existing getter but field "i
You should change methodname from getAlldata to ge

(line 11,col 5)-(line 13,col 5)
method "setAlldata" is existing setter but field "i
```
