

J2KconvertSupport の使い方

Written by Kazuma Kouno, date:2021/5/31

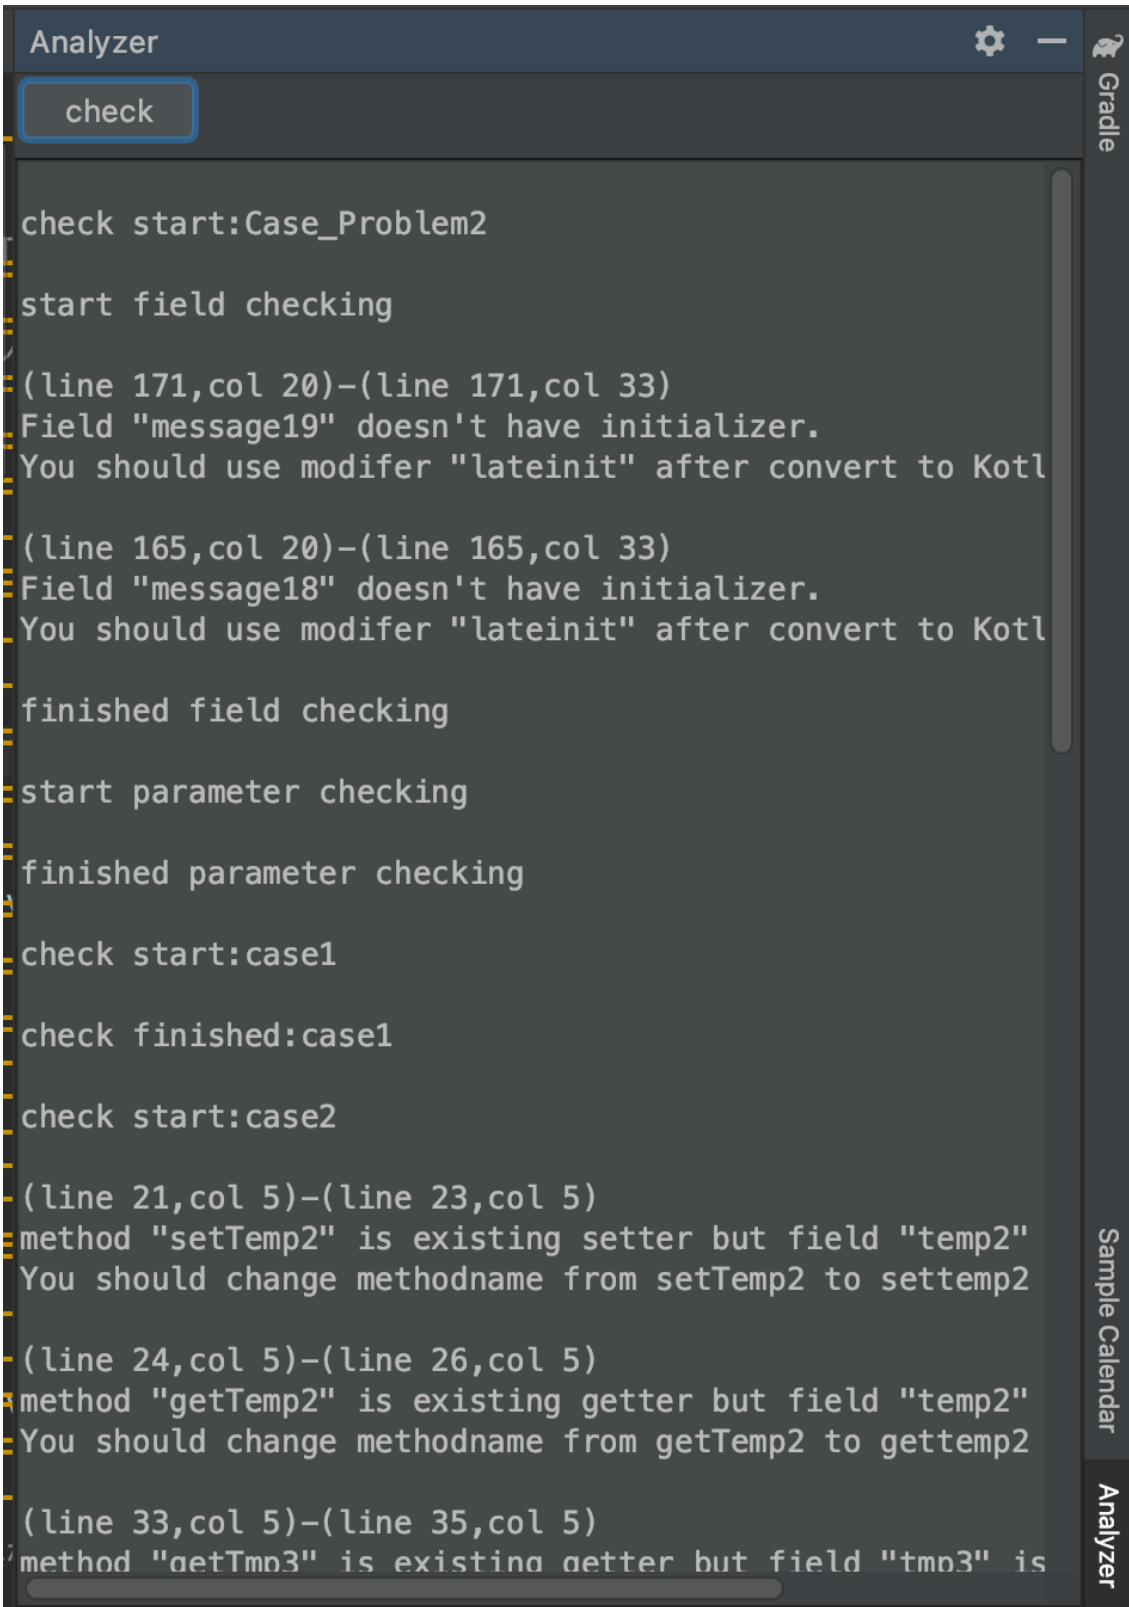

1：右下の「Analyzer」タブをクリック

2：解析を行いたいプログラム1つが黄色表示になっているのを確認し、そのプログラムをエディタ上で開いた上でタブ内左上の「check」ボタンをクリック

3 : 解析結果が右に出力される

```
Analyzer
check

check start:Case_Problem2

start field checking

(line 171,col 20)-(line 171,col 33)
Field "message19" doesn't have initializer.
You should use modifier "lateinit" after convert to Kotlin

(line 165,col 20)-(line 165,col 33)
Field "message18" doesn't have initializer.
You should use modifier "lateinit" after convert to Kotlin

finished field checking

start parameter checking

finished parameter checking

check start:case1

check finished:case1

check start:case2

(line 21,col 5)-(line 23,col 5)
method "setTemp2" is existing setter but field "temp2"
You should change methodname from setTemp2 to settemp2

(line 24,col 5)-(line 26,col 5)
method "getTemp2" is existing getter but field "temp2"
You should change methodname from getTemp2 to gettemp2

(line 33,col 5)-(line 35,col 5)
method "aetTm3" is existina getter but field "ttn3" is
```
